

***Puccinia sessile*** sur ***Brachypodium sylvaticum*** ; +/- 75 cm de haut, le long d'un chemin humide longeant un ruisseau, à épis fins et pendants, et feuilles assez larges - Perk 21/08/2025

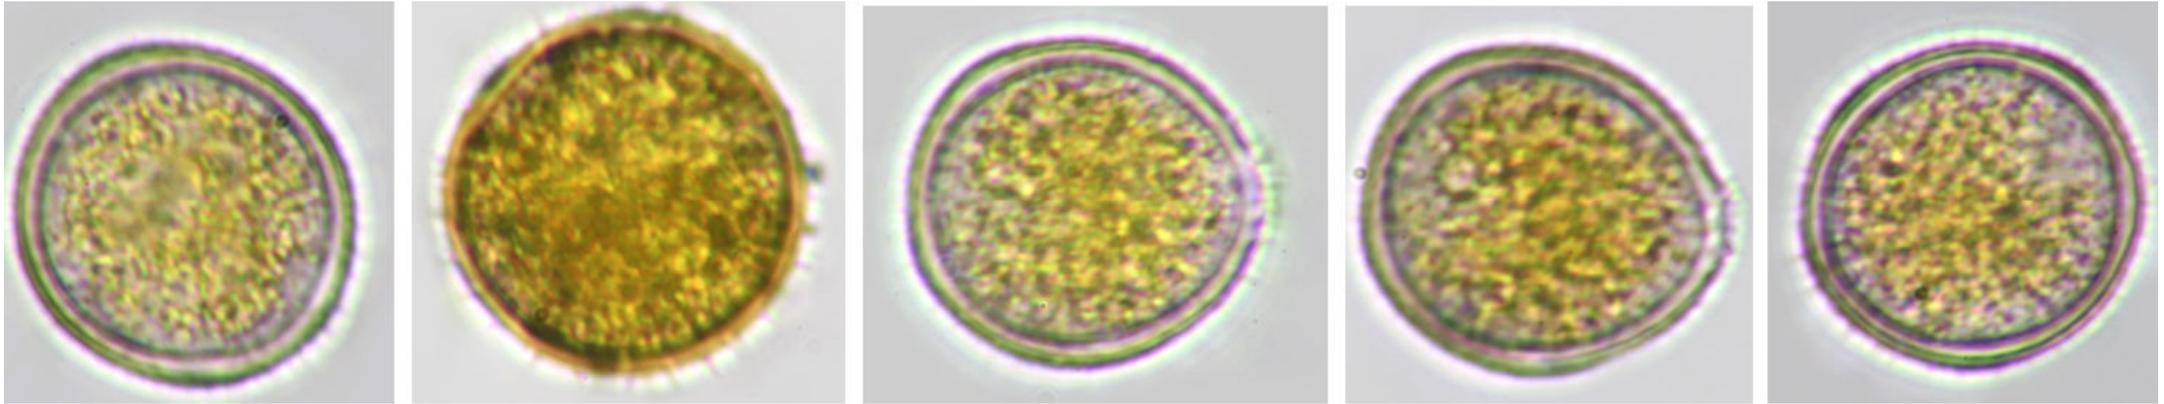

Fiche conçue et réalisée par Daniel Deschuyteneer

## Stade II

Spores épineuses, mesures : N = 20

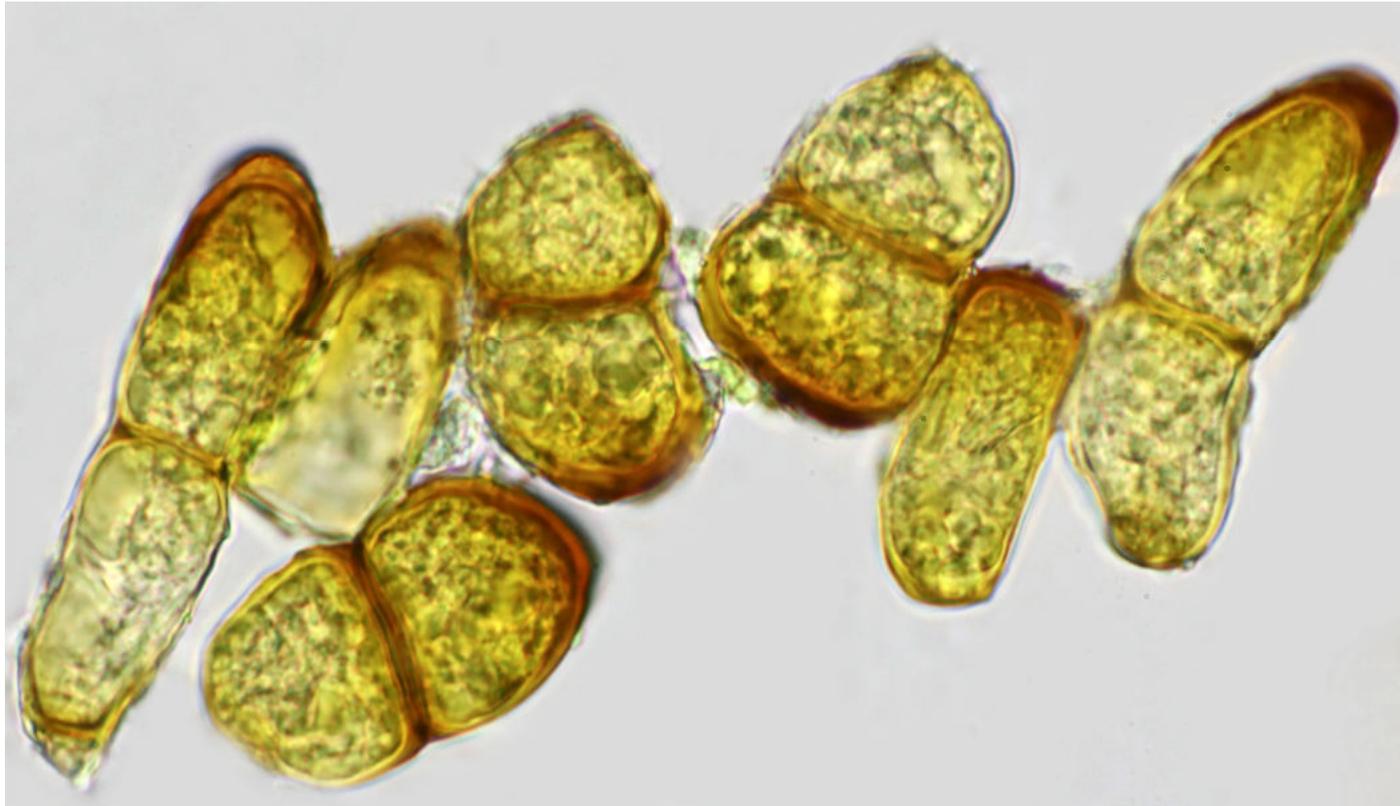

(19,5)21,2-25(25,7) × (18,6)20,6-22,6(24,1) μm

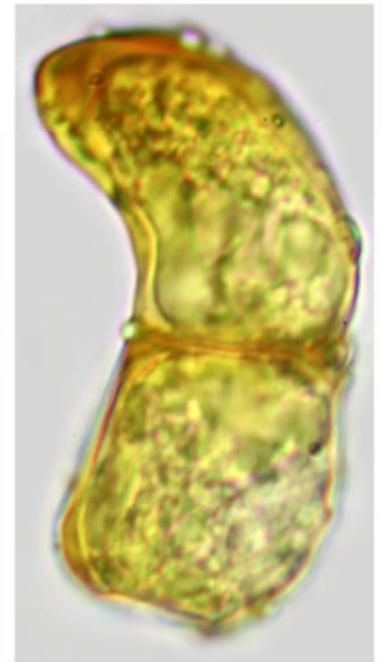

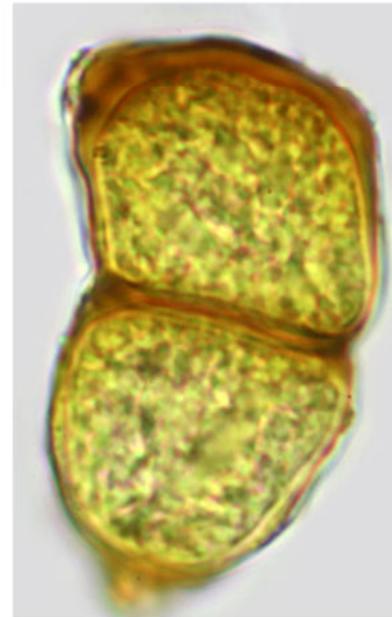

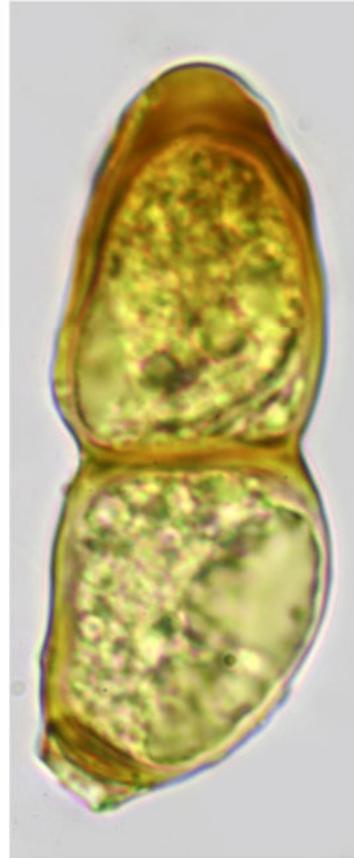

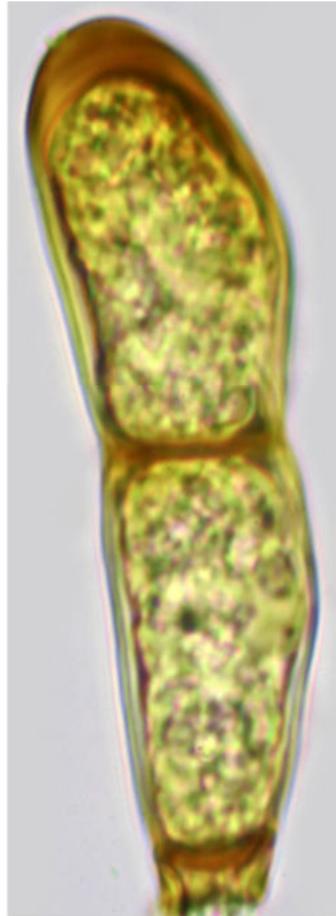

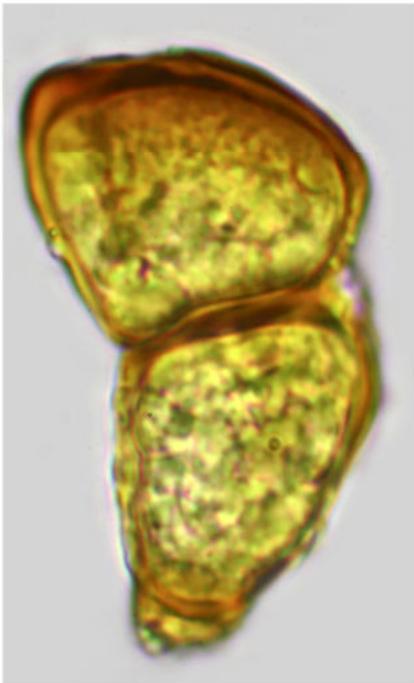

Stade III, à télies noires, disséminées.

Téleutospores non mesurées vu leur très grande variabilité d'aspect et de dimensions.

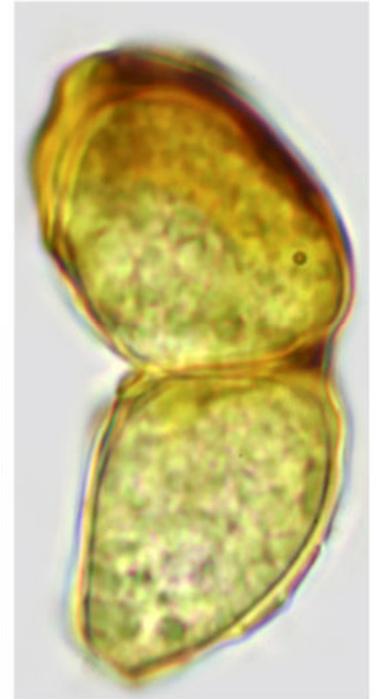

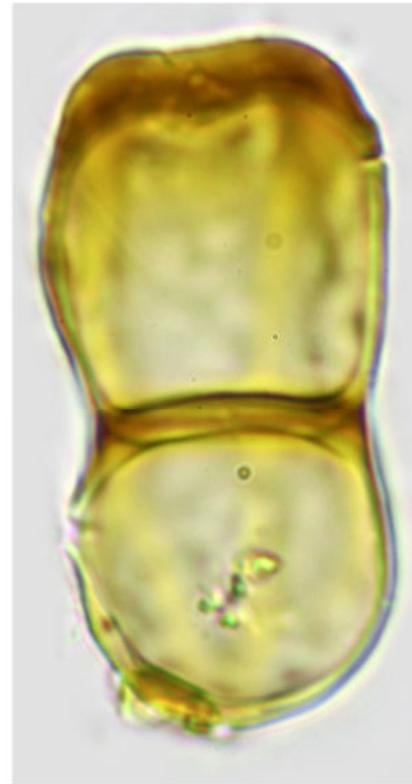

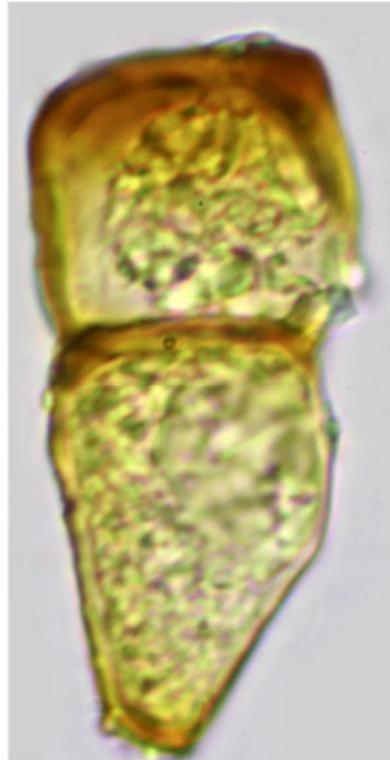

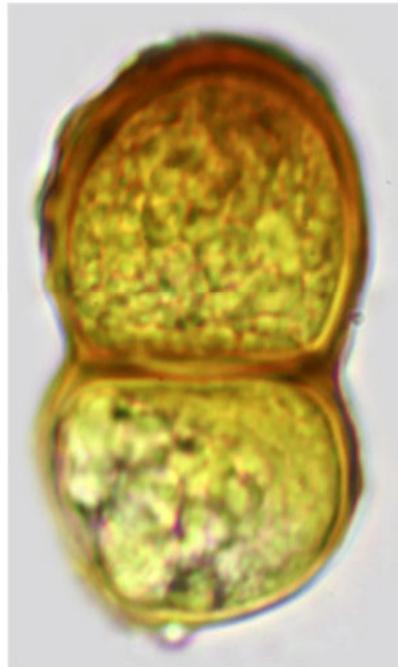

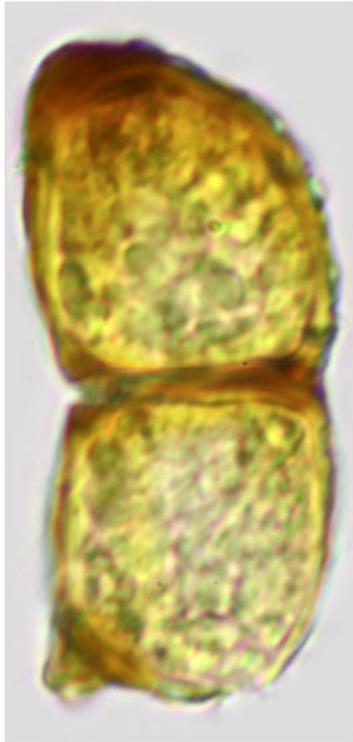

Apex toujours très épais aplati ou en large bec proéminent. A noter l'aspect très souvent arqué des téleutospores.

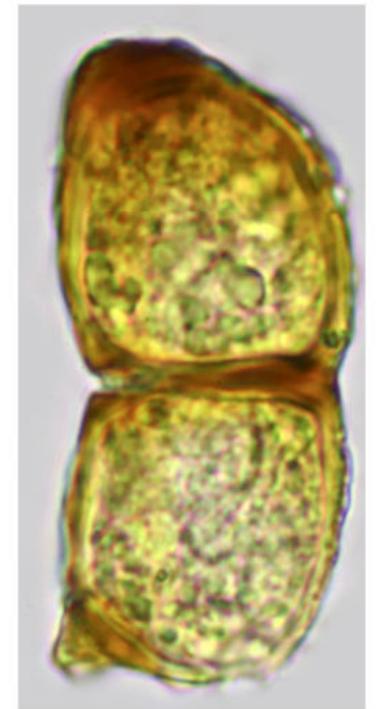

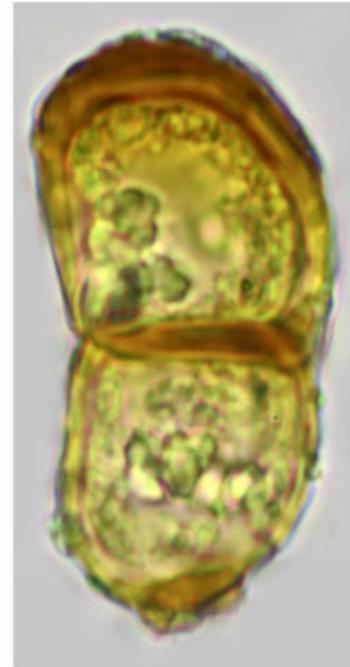

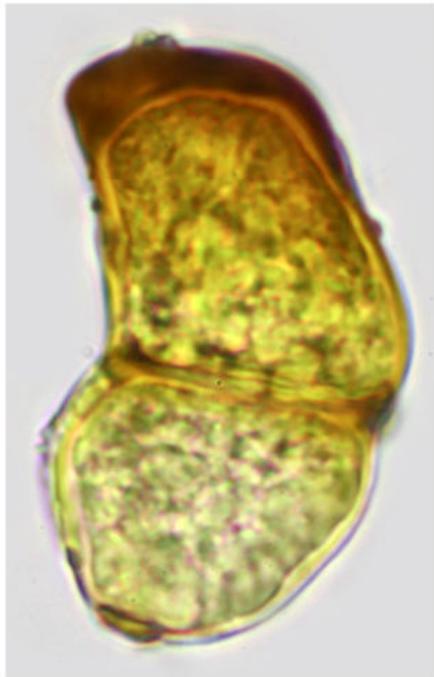

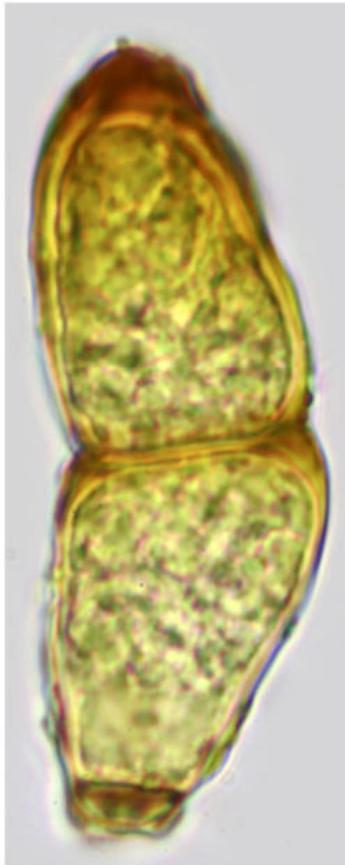

Aspect très variable, souvent arqué. Dimensions très variables

Aspect très variable, souvent arqué. Dimensions très variables

Aspect très variable, souvent arqué. Dimensions très variables
